Responsibilities

The Residential Solar QA Inspector positions are ideally suited for independent contractors who can provide inspection services on an as-needed basis. The number of inspections needed will vary based on current volume of active contracts for which services are needed.

The Residential Solar QA Inspector performs quality assurance inspection services and reporting of residential solar system installations to ensure compliance with product manufacturers' installation instructions, building/electrical/mechanical/plumbing codes and standards, and industry best practices.

A person in this position is expected to demonstrate (a) expertise in quality assurance systems, preferably with a strong knowledge of Photovoltaic (PV) technologies and installation practices;

(b) knowledge as to the application of corresponding building, electrical and fire codes; (d) professionalism in customer relations with all levels of clients and coworkers, (c) the ability to work effectively with a diverse group of stakeholders, and the ability to successfully complete projects on time and within budget.

- Schedule and perform Solar QA inspections as assigned by IBTS
- Ensure that inspections are performed within turnaround times as determined by IBTS.
- Perform quality assurance inspections/audits of residential solar system installations.
- Inspect properties and materials for compliance with plans, specifications, and manufacturers' requirements.
- Document the audit with a full photo taken to illustrate all findings on-site, and provide descriptions of any issues which have noted deficiencies and require corrective action. Complete applicable inspection forms and submit along with photos within 3 days of inspection completion.
- Maintain data on residential PV products, installation instructions, test methods, and other documents as deemed appropriate for the work. Must stay continually educated in solar product changes and code requirements.
- Participate in training and monthly meetings as provided or directed by IBTS to educate inspectors on expectations to perform assignments. Obtain and maintain certifications/licenses as offered by IBTS.

Qualifications

REQUIRED

- Must have a valid Driver's License and reliable vehicle transportation.
- Excellent organizational skills and attention to details.
- Own and be able to operate with efficiency and ease: cell phone, digital camera, and computer with internet access (*preferably PC*).
- Able to communicate effectively and professionally with homeowners, business owners, PV installation contractors, and IBTS management team.
- Own (or be willing to acquire them immediately) and be able to operate basic tool set.
- Maintain any relevant certifications and/or licenses that are required by your local jurisdiction for carrying out assigned tasks.

PREFERRED

- Licensed Electrician, Certified Electrical Inspector.
- Combined 3 years or more experience in design or installation of electrical systems and/or inspection of residential electrical or solar electrical systems.
- Extensive knowledge of applicable codes, standards, and trade practices.
- Working knowledge of reading plans, specifications, and product manufacturers' installation instructions.

EDUCATION/EXPERIENCE REQUIREMENTS

REQUIRED

- High school diploma or GED
- Basic entry-level coursework in solar photovoltaics, or minimum 6 months experience in the solar electrical industry, or related construction employment.

PREFERRED

- 3 years construction and/or inspection experience.
- 3 years' experience in Solar PV installation, design, or inspection services.
- OSHA 10-hour certification training.

PREFERRED LICENSE OR CERTIFICATION

- NABCEP Certified Installation Professional or NABCEP Entry Level / Associate.
- International Code Council (ICC) certification as a Residential Electrical Inspector.
- License as a General / Electrical Contractor, or license/certification as a solar system installer.

Physical Demands

Most of the work will be performed in the field on residential construction jobsites; some work in the office will also be required and as such the following working conditions apply:

- Position requires sitting, standing, walking on un-level and slippery surfaces including pitched roofs, climbing ladders, accessing confined spaces such as attics and crawl spaces, reaching, twisting, turning, kneeling, bending, stooping, squatting, crouching, grasping, crawling and making repetitive hand movements in the performance of daily activities.
- Significant local travel on daily inspection routes anticipated.
